- Research team oriented to EMF investigation:
  - provide scientific expertise to Government agencies for non-ionizing radiation, as well as
  - Serbian Regulatory Agency for Electronic Communications and Postal Services – RATEL.
- Experimental Serbian Electromagnetic Field Monitoring Network – SEMONT:
  - development of SEMONT start in 2010,
  - the EMF RATEL is successor of experimental SEMONT system.
- Deeply involved in development of EMF RATEL network:
  - in charge for improvement and maintenance of EMF RATEL software-information logistic.

# Outline

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination

Features

Conclusion

- Introduction
- A – EMF RATEL network:
  - concept,
  - continuous monitoring.
- B – EMF RATEL sensors:
  - broadband monitoring,
  - service-based monitoring ,
  - data acquisition,
  - sensor installation and locations.
- C – Monitoring results dissemination:
  - public Internet portal,
  - administrative part,
  - open data portal.
- Continuous monitoring features
- Conclusion

# Introduction (1/2)

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination

Features

Conclusion

4/35

- The Serbian EMF legislation, related to the general public:
  - was systemized in 2009, relying on the ICNIRP 1998 guidelines,
  - a set of documents is defined by the "*Law on non-ionizing radiation protection*",
  - ICNIRP 1998 reference levels are additionally lowered by factor of 2.5.
- Regarding occupational exposure:
  - the "*Law on safety and health at work*" is in charge,
  - ICNIRP 1998 limits are maintained, without any additional safety factor.
- The Serbian EMF legislation is focused only on whole-body exposure:
  - the ISO/IEC 17025 accredited laboratories perform appropriate EMF investigations,
  - measurements are mostly oriented to specific EMF source, during a short-time and in a spot.
- Implementation of ICNIRP 2020 is under the way:
  - through the project "*Analysis of measures for harmonization of national legislation with ICNIRP 2020 international recommendations for limiting exposure to electromagnetic fields*",
  - my research team leads this project.

# Introduction (2/2)

Introduction

EMF RATEL network

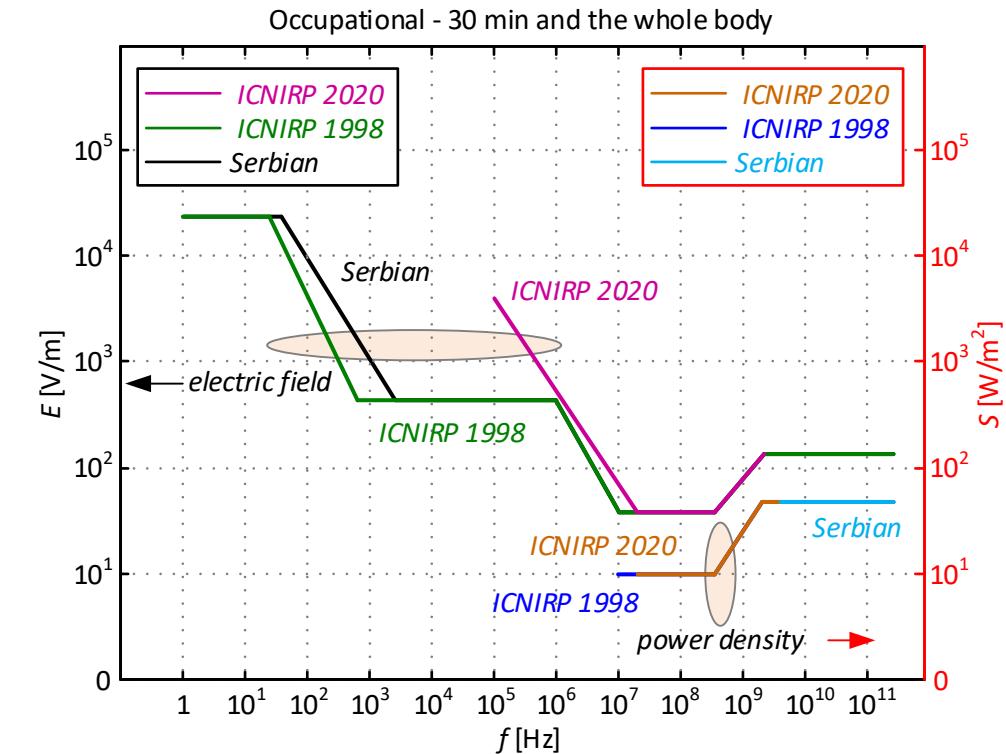

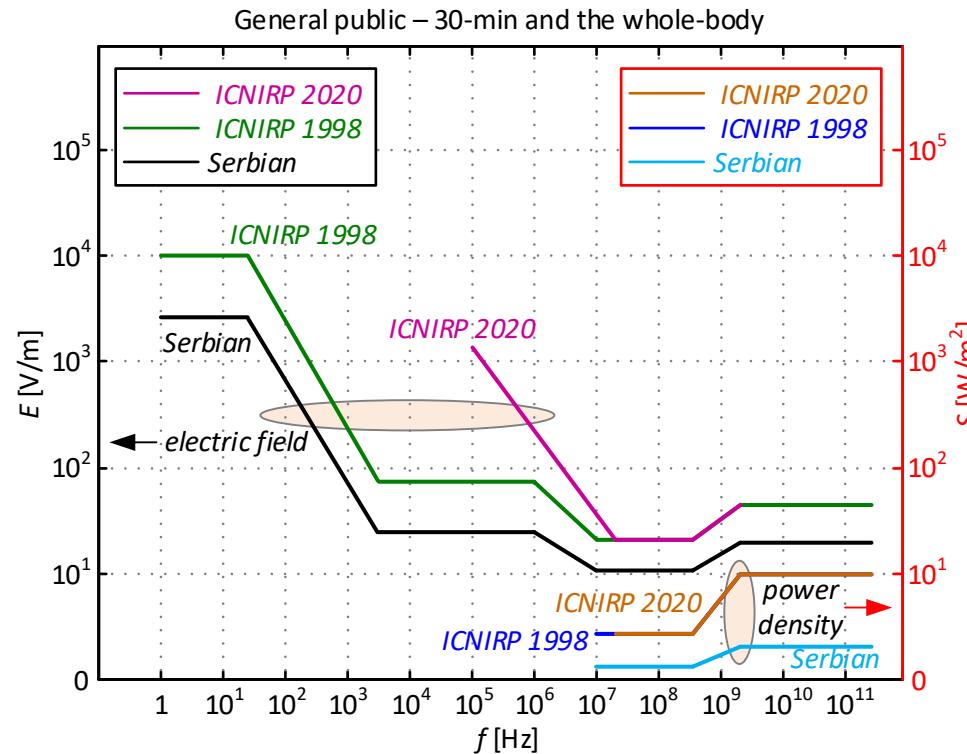

EMF RATEL sensors

Dissemination

Features

Conclusion

- Summary overview of Serbian limits versus ICNIRP recommendation:

- the ICNIRP basic limits are maintained in both cases.
- reference levels are lowered by 2.5 factor, regarding concerns of the general public.
- the Serbian legislation does not deal with local exposure.

# A – EMF RATEL network (1/2)

Introduction

EMF RATEL network

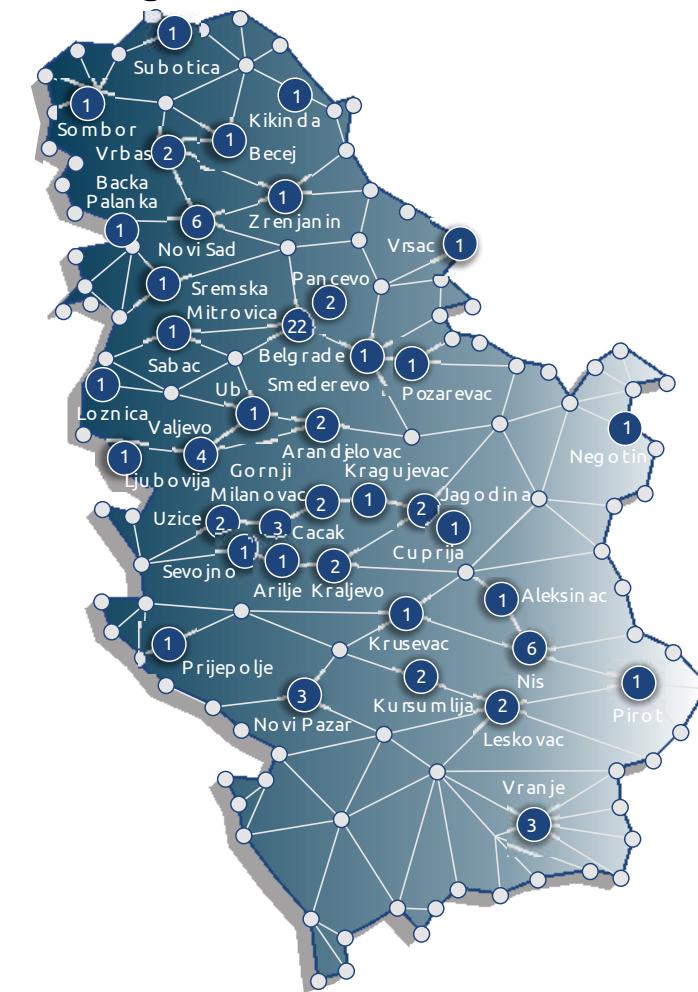

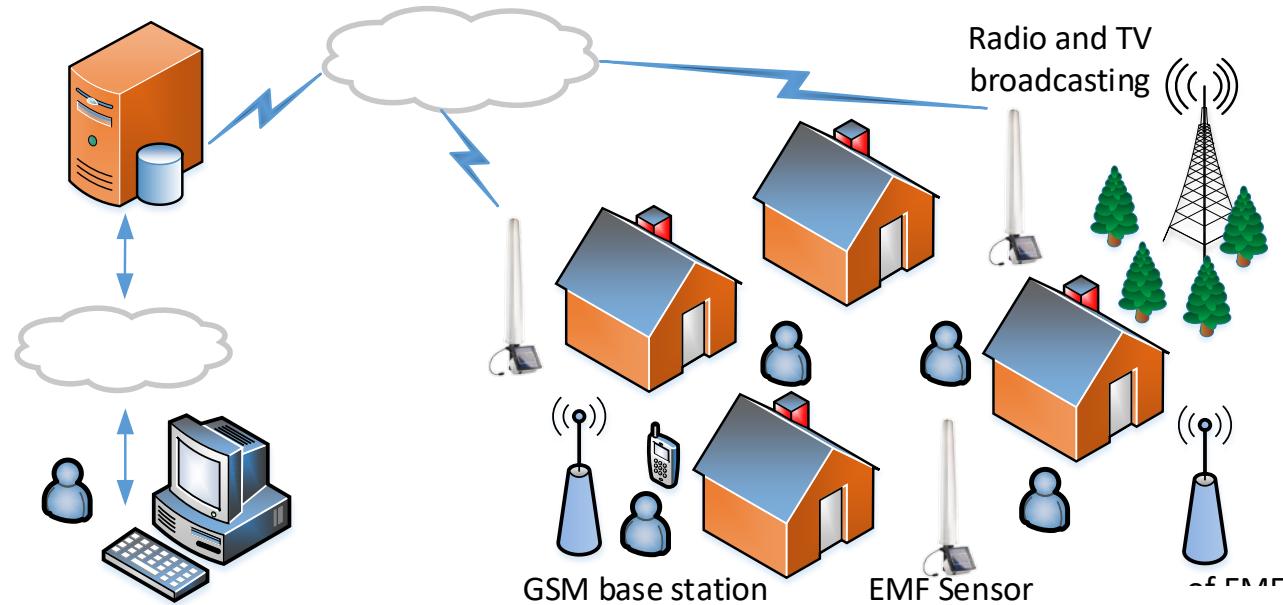

EMF RATEL sensors

Dissemination

Features

Conclusion

- The concept of EMF RATEL network:
  - the network is established on spatially distributed wireless monitoring sensors.

- EMF RATEL was launched by RATEL in 2017:
  - RATEL is responsible for running this network,
  - currently, 88 sensors are installed over the country.

# A – EMF RATEL network (2/2)

Introduction

EMF RATEL network

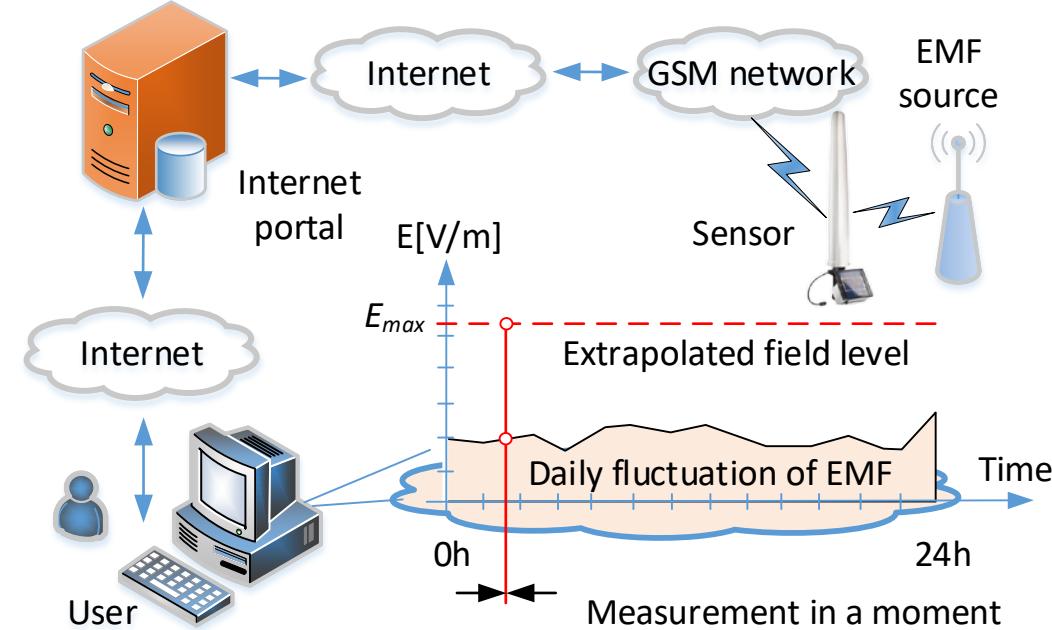

EMF RATEL sensors

Dissemination

Features

Conclusion

- EMF RATEL network performs continuous EMF monitoring (24/365):
  - daily EMF fluctuation is in a focus.

- Classical measurements require extrapolation for exposure assessment:
  - those measurements are performed in a moment and have no detailed insight in behavior of EMF,
  - also, it can be questionable does and when the EMF source radiate with maximal power.

# B – EMF RATEL sensors (1/4)

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination

Features

Conclusion

- The EMF RATEL broadband monitoring is performed by two type of sensors:

- Narda AMB 8059,
- E field probe EP-1B-03,
- 100 kHz to 7 GHz,
- currently 65 sensors,

- Wavecontrol MonitEM,
- E field probe WPF8,
- 100 kHz to 8 GHz,
- currently 21 sensors.

- International Telecommunication Union (ITU)-T recommendation:
  - K.83 – “Monitoring of electromagnetic field levels” (06/2020 – page 26 with EMF RATEL).
- ITU-T K.83 gives guidance on:
  - how to make long-term measurements for the monitoring of EMFs in the selected areas that are under the public concern, in order to show that EMFs are under control and under the limits.
- The purpose of this Recommendation is to provide clear approach and easily available data, concerning EMF levels, particularly in form of results of continuous measurement.

# B – EMF RATEL sensors (2/4)

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination

Features

Conclusion

9/35

- The EMF RATEL **service-based** EMF monitoring is performed by:
  - Narda AMS 8061 monitoring station + EHA-2B-01 electric field probe (100 kHz – 6 GHz),
  - simultaneous EMF monitoring in up to 20 independent, programmable, frequency sub-bands,
  - broadband monitoring in service-frequency sub-band (service-based monitoring).

- › **ITU-T K.83 compliant**
- › Monitors individually programmable frequency bands
- › Internal modem for wireless communication
- › USB / Ethernet data transfer
- › SD memory card
- › Temperature / air humidity sensor
- › GPS sensor
- › PC software with alarm functions
- › Autonomous power supply from solar cells

No.	Frequency sub-band	Telecommunication service
1.	87 MHz – 108 MHz	FM radio
2.	430 MHz – 470 MHz	Functional radio links
3.	470 MHz – 790 MHz	Digital TV (DVB-T2)
4.	790 MHz – 821 MHz	Mobile 4G download (DL)
5.	832 MHz – 862 MHz	Mobile 4G upload (UL)
6.	880 MHz – 915 MHz	Mobile 2G/3G UL
7.	925 MHz – 960 MHz	Mobile 2G/3G DL
8.	1710 MHz – 1780 MHz	Mobile 2G/4G UL
9.	1800 MHz – 1880 MHz	Mobile 2G/3G DL
10.	2110 MHz – 2170 MHz	Mobile 3G DL
11.	2400 MHz – 2500 MHz	Wi-Fi
12.	2520 MHz – 2660 MHz	Mobile 4G – NSA 5G UL/DL
13.	<b>3400 MHz – 3800 MHz</b>	<b>Mobile 5G DL/UL</b>
14.	5200 MHz – 5800 MHz	Wi-Fi

# B – EMF RATEL sensors (3/4)

Introduction

EMF RATEL network

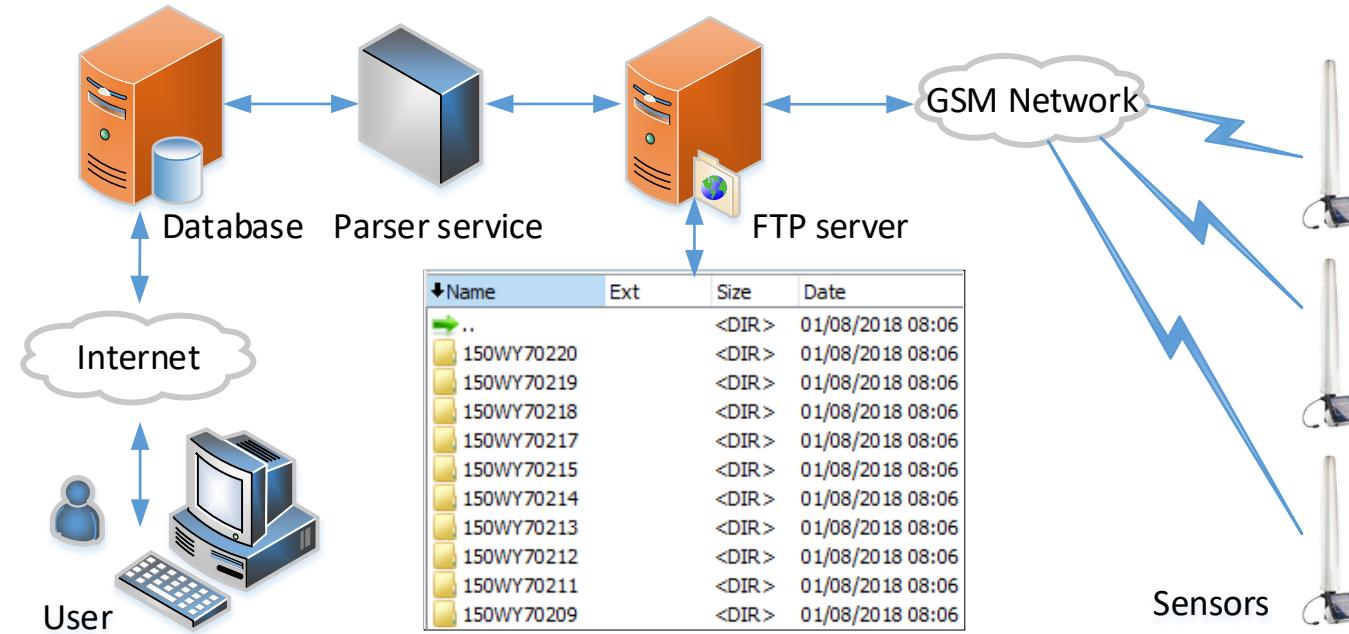

EMF RATEL sensors

Dissemination

Features

Conclusion

- Data acquisition – Narda sensors:
  - measurement results are daily transferred to the centralized database,

- GSM modem allows Internet access over the existing mobile telephony network,
- the measurement results are packed into specially formatted ".D59" and ".D61" files,
- dedicated parser function is required for processing of these ".D59" and ".D61" files.

# B – EMF RATEL sensors (3/4)

# B – EMF RATEL sensors (4/4)

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination

Features

Conclusion

12/35

- Sensor installation and locations:

- sensitive zones of special interest: schools, kindergartens, hospitals and public institutions,
- sensor installation is based on a goodwill of the site owner.

- AC supply + solar panel,
- solar panel – primary,
- battery below threshold
  - switch to AC.
- mini construction project
  - concrete plinth,
  - plastic mast.

## EMF LEVEL MONITORING

7/24 CONTINUOUS MONITORING

Welcome to the internet portal of the national EMF RATEL system for continuous monitoring of the high-frequency electric field level.

EMF RATEL is intended for day-to-day monitoring of changes in the electric field level, as well as an assessment of the exposure of the general population to these fields.

In addition, this system performs so-called broadband field level measurements, taking into account the contribution of all active electric field sources, in the vicinity of measurement stations.

MEASUREMENT RESULTS

At this web site you can see the current measurement results of the electric field level monitoring, for certain locations. The locations of the measuring stations are displayed on the corresponding interactive map, whereby with simple navigation, you can see the surroundings of the measuring station.

Measured field and exposure levels of the general population are shown using charts where you can see changes in the field level over the desired time period.

- Measurements are performed every 6 minutes – SRPS EN 50413:2010/A1:2014.
- Uncertainty in measurement - JCGM 100:2008.

# C – Monitoring results dissemination (1/3 - d)

Introduction

EMF RATEL network

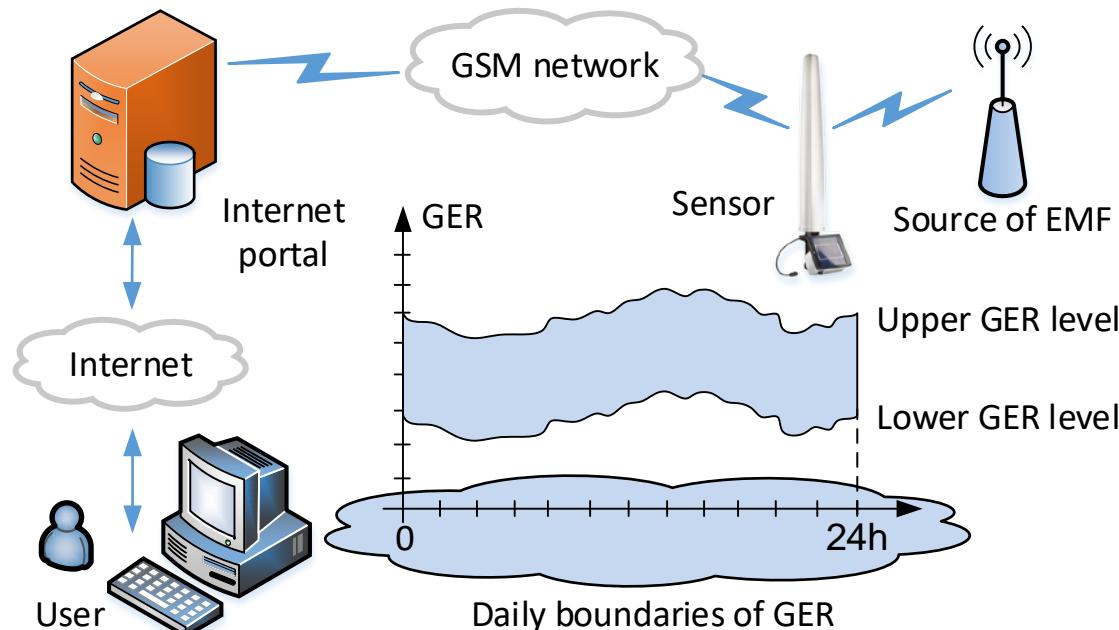

EMF RATEL sensors

Dissemination (4/12)

Features

Conclusion

- Exposure assessment:
  - Adaptive Boundary approach\* is used, calculating upper and lower Global Exposure Ratio (*GER*) boundaries.

*GER* boundaries are calculated as:

$$GER_{low} = \left( \frac{E_m}{E_{ref \ max}(f_1)} \right)^2 \quad \text{and} \quad GER_{up} = \left( \frac{E_m}{E_{ref \ min}(f_2)} \right)^2,$$

Application of boundary approach leads to the assessment of the range where the real exposure can be found, since:

$$GER_{low} \leq GER_{real} \leq GER_{up}.$$

\*D. Kljajic, N. Djuric, "The adaptive boundary approach for exposure assessment in a broad-band EMF monitoring", Measurement, vol. 93, pp. 515–523, Nov. 2016, doi: 10.1016/j.measurement.2016.07.055.

- The method of assessment is conditioned by the fact that broadband monitoring is performed – unknown frequencies in present EMF spectrum.

Dissemination (6/12)

Features

Conclusion

- Initial results of 5G EMF monitoring:
  - from November 1<sup>th</sup>, 2019 till March 19<sup>th</sup> 2020, in which 5G network was tested is Serbia.

- EMF values are acquired in testing period:
  - it can be presumed that levels will be the same during the full utilization of 5G technology.
- The 5G is to be implemented in Serbia during 2022:
  - additional EMF monitoring campaign, in order to obtain EMF levels of fully functional 5G.

# C – Monitoring results dissemination (2/3 - a)

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination (7/12)

Features

Conclusion

- Information logistic for system – admin part:

The screenshot shows the EMF RATEL web application interface. At the top, there is a navigation bar with links: Sensors, Locations, Measurings, Results of measurement (which is the active tab), Field values, Alarms, Batteries, Statistics, Articles, Settings, and Logout. Below the navigation bar, the title "Measuring results" is displayed. On the left, there are filters: "Type of measuring" set to "Active measurings only", "Location" set to "All locations", and a dropdown menu for "Selected location" which is currently open, showing options like "Нови Сад - all locations" and "Београд - all locations". In the center, there are two input fields: "Total number of locations" (91) and "Inactive" (2). To the right of these fields, there is a "Show results" button. Below this section, there is a map of the Balkan Peninsula with several monitoring stations marked by blue icons. A callout box over one of the icons provides details: "Novi Sad - all locations" and "Београд - all locations". The map also includes labels for various cities and roads.

# Continuous monitoring features

Introduction

EMF RATEL network

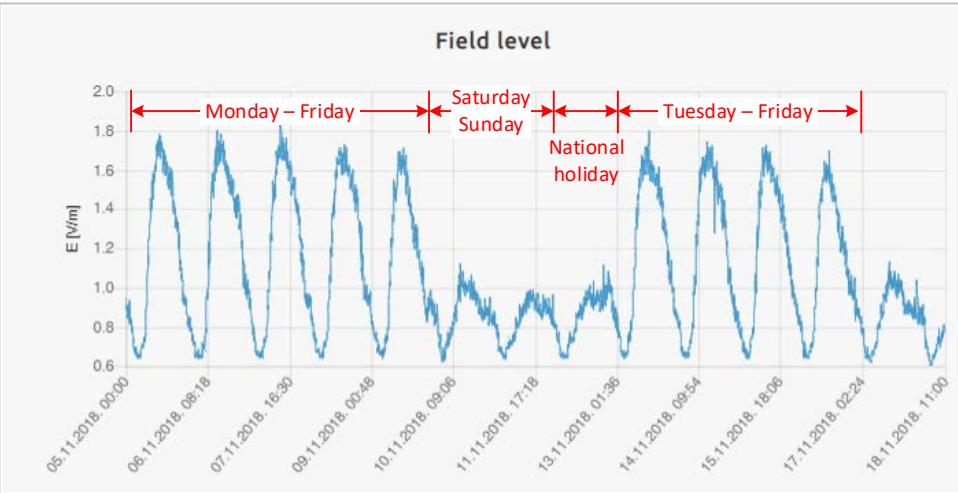

EMF RATEL sensors

Dissemination

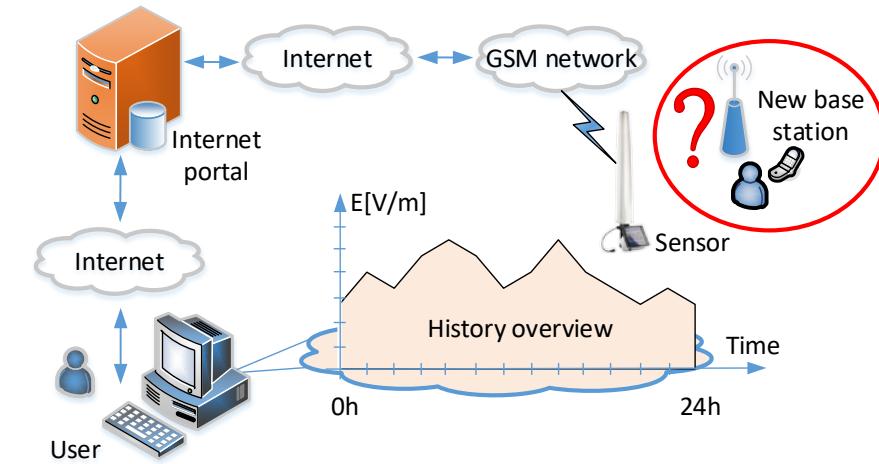

Features

Conclusion

- Long-term monitoring is able to provide information on EMF fluctuation:

EMF history overview

Installation of a new EMF source on location

- 24/365 monitoring,
- past + present + predicted field levels for location,
- EMF register for locations of interest,
- better control of EMF,
- better control where and when new EMF source can be installed,
- etc...

# Conclusion

Introduction

EMF RATEL network

EMF RATEL sensors

Dissemination

Features

Conclusion

34/35

- EMF RATEL monitoring network offers:
  - continuous EMF monitoring (broadband + broadband per telecommunication services),
  - service-based approach can provide comparison between EMF levels of 5G and 2G/3G/4G networks.
- Systems intends to improve the quality of human life:
  - in approaching intensive EMF radiated environment,
  - particularly for regions, where social awareness on EMF and environment could be additionally increased,
  - demanding feature to timely inform the public on existing EMF levels and their influence on health.
- EMF RATEL become a useful and user-friendly tool for:
  - the general population, interested on daily EMF fluctuation, as well as for
  - regulatory agencies, which are in charge for regulation and protection of environment from possible harmful level of non-ionizing radiation.
- Finally, this system and its features can serve as an appropriate mediator:
  - between normal requests of the general population for the EMF safe living environment and
  - commercial operators that require additional EMF sources, in order to improve their telecommunication infrastructure.

"Monitoring of immissions and actual exposures of the general population to anthropogenic low and high frequency electromagnetic fields (EMF)", November 25-26, 2021, Munich/Bavaria
